

# The DSR 2400 Series

The DSR 2400 Series is a low cost, easy to use standalone CD recordable duplication system. The 24X disc to disc technology developed and distributed by Hoei Sangyo and Microboards Technology requires no hard drive to make multiple copies. Image files are cached on-the-fly to multiple writers simultaneously. The DSR 2400 features Test, Record, and Test & Record modes. LED indicators provide easy detection of errors during the record process, preventing bad disc duplication and also monitoring the status of the recording session.

## Supported Formats:

- The DSR 2400 supports 24x recording of CD ROM Modes 1 and 2 (including RockRidge), CD-I Ready, and more! CD-DA (Audio), Video CD and Photo CD (CD-ROM XA) are also supported with variable speed recording. Call your account manager for a complete list of supported formats.

## Multiple Process Modes:

- Actual COPY: Copy directly from the source CD to the writer(s) simultaneously. TEST Copy: Copy from the source CD to the blank disc as a test, no data is burned to the disc.

## Easy Future Upgrades:

- Turn on power with the START button down, and insert the new firmware disc into the master recorder. The system will automatically download the new firmware to the controller and eject the disc when complete.

## One-Year Warranty:

The DSR 2400 series comes with a one year warranty. In addition, Microboards offers the MicroCare Warranty Service Program for DSR 2400 users, minimizing downtime and repair costs. Contact your Microboards Account Manager for details.
